

ASZ-800 Series Retraction Device for Furnace Probes

FUNCTIONALITY

The retraction devices of the ASZ-800 series serve to protect the furnace probes used for combustion chamber interior observations. In case of malfunctions, the probe is automatically moved out of the furnace by the retraction device; the furnace opening is sealed by the forced actuated shutter. These measures prevent damage to the probe, camera and lens due over-heating. The pneumatically controlled retraction devices of the ASZ-800 series have the following main functions:

- Fully automatic extension of a furnace probe from the combustion chamber in case of failure of cooling media, compressed air or mains voltage
- Service-friendly, manual movement of the probe for cost-effective maintenance work without assembly effort for removal and installation
- Adjustment of mounting position and viewing angle remain unchanged

KEY FEATURES

- Pneumatically controlled linear actuator
- Variable probe installation depths, position-independent installation
- Forced actuated shutter
- Corrosion-resistant
- Different stroke lengths available
- Default designed for probe diameters for 70mm and 104 mm
- Optional 360° rotatable probe
